

ACTIONABLE CYBER INTELLIGENCE

Making your business objectives reality
 Knowledge. Experience. Methodologies. Technology.

How can I to Prevent Unauthorized Access to Sensitive Data?

TurtleBay Advisory Services (TBAS) has the answer to that question. TBAS has specialized in Business and Technology transformation, within the financial services sector, for over 20 years. This cyber-intelligence technology is a strategic solution that was developed in direct response to the ever-changing threat landscape. We can give your organization the unparalleled visibility to actively identify exposure.

Custom Notification Settings

Reporting includes the full session URL, endpoint IP Address, device user agent, and timestamp. This allows for immediate remediation. All threat intelligence can be customized according to session and risk type. Alerts can be transmitted in real time via STIX/TAXII or custom API. Alternatively, audits may be conducted over a specified monitoring period.

Examples	Session Type	Network	Med	High	Urgent
bank.com/learnmore	public content	internal			
bank.com/refi_application		external			
m.bank.com/ourhistory					
myaccounts.bank.com/initiate_wire	non-public client content	internal			
trade.bank.com/ticker=MSFT&ordertype=SELL		external			
fraud.bank.com/verifycharges					
imaging.s3.bank.com/checkprocessing	non-public vendor content	internal			
ariba.bank.com/backgroundcheck		external			
bank.cloudbox.com/vendorSFTP_access					
webmail.bank.com/user=john.smith17	non-public employee content	internal			
myvpn.bank.com/authentication_success		external			
codebase.bank.com/backups					

Compromised endpoints remain an attractive and reliable vector for cyber adversaries. When session information is broadcasted from a compromised endpoint, the URL of the session is analyzed to identify any exposure for your organization. If sensitive data is being sent or received by an endpoint that is broadcasting to 3rd Parties, TBAS can identify the specific device and session information at risk.

The unique aspect of our technology is that access to your facilities or networks is *not* required. You can have access to enterprise-wide visibility, beyond endpoint software and firewalls, and reporting is device-specific. Additionally, on-going Independent Verification & Validation (IV&V) support is provided to improve quality, incite continuous improvement, and ensure compliance.
