

AUTOMATED INCIDENT MANAGEMENT & ORCHESTRATION

Making your business objectives reality
Knowledge. Experience. Methodologies. Technology.

When you need to respond quickly to a cyberattack, alerting, ticketing, and communications systems alone will not help you get the job done.

We deliver the key capabilities for command & control of critical incidents:

Automatically onboard internal and external incident stakeholders

Optimize all relevant incident management tools through seamless integration

Have one single, integrated interface for tracking and managing every aspect of the incident including tasks and actions

Automatically push alerts and updates to the right people at the right time

Have a centralized repository for real-time knowledge access and management

Effortlessly and easily access to incident summary, reports, and other documentation

Accelerate the root cause analysis

Cyber attackers threaten businesses every day. A major cyberattack can lead to high costs and many hours of downtime, while also devastating your reputation.

You need to be able to respond quickly to cyberattacks by having one centralized virtual workspace where you can automatically and immediately get everyone onboard, aligned, and continually updated.

The platform coordinates all stakeholders and systems all the time, orchestrating complex workflows from trigger to resolution, simplifying the post-mortem, and leveraging lessons learned for ongoing optimization.

Testimonial:

"Our initial response time has been reduced from 1-2 hours to a few minutes and our triage time has been reduced from 1 hour to 15 minutes." Global Security Solution Provider
