

Visual Classification and Data Extraction

- Mortgage documents are notoriously of poor image quality and do not process well using conventional text extraction and analytics. We are the only company using visual classification and data extraction technology together with visual appearance and element detection instead of text to classify and process documents. Visual classification includes not only document type detection but also identifying the beginning and end of individual documents.

Outlier Detection

- Most data sets contain documents which are irrelevant to the business objective, and identifying these documents and filtering them out prevents this “noise” from contaminating the results.

Deep Learning

- Trends and patterns in the data are important so as to detect in order to make processing more efficient and accurate.

Custom Workflows

- Mortgage processing is a complex series of tasks which interact with several systems simultaneously and multiple departments while contributing to the overall workflow. Our flexible tool set can be customized to feed results to these various systems and create custom operator interfaces to streamline the workflow. Our competitors do not offer this capability.

Pre- built Classification and Extraction Templates

- Some examples include IRS 1040, IRS 4506, Mortgage Note, Mortgage Deed and more...

Mortgage Industry Experience

- The mortgage industry has a large overlap in document types which is common to all loans. We have developed a library of these standard documents and use that library across its client base, which sets it apart from other players.

Key Benefits:

- *Information Security and Governance*
- *Reduces vulnerabilities and costs of unwanted exposure to sensitive enterprise information and intellectual property*
- *Cost and Risk Mitigation*
- *Defensively and quantitatively identifies high value content, ROT, expired as well as at risk content*
- *Rapid gratification to IT and business stake holders*
- *Agile and rapid implementation delivers results in weeks, not months or years*
- *Comprehensive analytics*
- *Deep dive into content, including relationships, life cycle and relevance to business use case*
